

Forklift Fork Positioner

Forklift Fork Positioner - The fork positioner is actually a hydraulic apparatus which can allow the the one driving to be able to control the lift truck without leaving the seat. They are constructed out of high quality materials and are meant to endure the most demanding procedures and work environments. Side shifting units have the extra ability to be able to laterally position the entire load or the arms so as to facilitate much more exact carrying and position in a quicker and much more efficient manner.

The blade pocket is quite unique and can enable the person operating it to be able to securely sway the blades into position without any worry of destroying the positioning cylinders. This could allow the operator the choice to perform independent or simultaneous fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages can be converted into fork positioners on existing units.
